DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-55 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,846,994. Although the conflicting claims are not identical, they are not patentably distinct from each other because Both the US Pat. 6,846,944, to Wenner, and the current invention are involved with an electrical device having a delay closure of an electrical circuit intended to be operated remotely in an environment where an environmental attribute changes. When the device reaches a region of changed environmental attribute the material dissolves and the device circuit closes.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 27-54 are rejected under 35 U.S.C. 102(b) as being anticipated by Iddan, US Pat. 5,604,531 (as provided by the Applicant).

Iddan discloses a delay activating switch device as claimed. A patient swallows an endoscopic device, the device takes pictures along the canal and transmitting to a receiver. Iddan discloses the device is battery powered.

Response to Arguments

5. Applicant's arguments filed August 4, 2005 have been fully considered but they are not persuasive. Applicant argues that Iddan (US Pat. 5,604,531) "fails to disclose the delayed activation" and that the examiner should provide "specific portion of Iddan which discloses the delayed activation functionality." The examiner respectfully disagrees with the

Applicant's arguments. Please refer to col. 4, lines 21-26, where Iddan describes a triggering event of "a particular environmental condition" to induce a delayed activation functionality of his video camera capsule. Therefore, indeed, Iddan teaches a delayed activation as claimed.
